

Removal of a rhodium-containing homogeneous catalyst

Abstract

- 5 A process for removing
a compound which bears at least two functional groups which are each independently
selected from the group consisting of nitrile group, carboxylic acid group, carboxylic
ester group and carboxamide group,
from a mixture which comprises
- 10 a compound which bears at least two functional groups which are each independently
selected from the group consisting of nitrile group, carboxylic acid group, carboxylic
ester group and carboxamide group, and
a compound which is homogeneous with respect to the mixture and contains rhodium,
by distillation.
